

Made for the trades

Blackboard® combines the best of practical and virtual learning. Leading vocational and technical institutions leverage the platform's unique capabilities to give students a head start in their chosen trade.

360° immersive video

Replicate real-world scenarios with **Blackboard's Immersive Video Studio**—complete with knowledge checks to ensure comprehension.

AI Conversation

Develop soft skills in a safe environment via Blackboard's exclusive AI capabilities. Engage students in realistic role-play simulations that mirror key interactions from their field.

Great mobile experience

Your students don't want to be confined to their desks. Blackboard is designed mobile-first, with a robust offline mode, so students can access their classes when and where they need to.

[Blackboard] allows students to engage with their classes anywhere, anytime, and on any device. It really helps our students who have gone through COVID and who live in a social media universe. They're not always confident to participate in practical tasks live with their peers in the classroom, so having this safe space like the AI Conversation to practice beforehand makes a huge difference.

—Dr. Celena Kusch, Executive Director, Center for Academic Innovation and Faculty Support, USC Upstate

Embraced by leading technical institutions
