

There's more to Learn *with Ultra*

Blackboard® Learn Ultra is the most comprehensive LMS available on the market. Designed to provide the flexibility that modern learners and instructors demand, Learn Ultra combines insight, innovation, and user feedback to support engaging and personalized learning experiences.

Ultra starts with U

Each user and institution can make Learn Ultra their own. With first-to-market tools that promote self-expression and customizable notifications, both students and instructors enjoy a personalized learning environment that responds to their needs. For instructors specifically, the new **Flexible Grading** interface allows efficient grading workflows that can be tailored to their preferred style of learner evaluation.

Inline and insightful

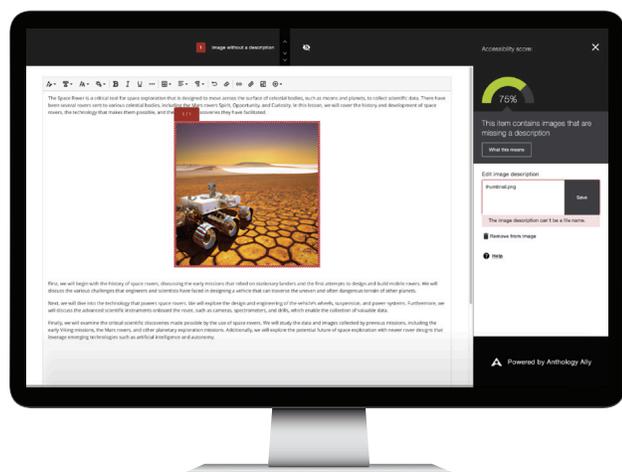

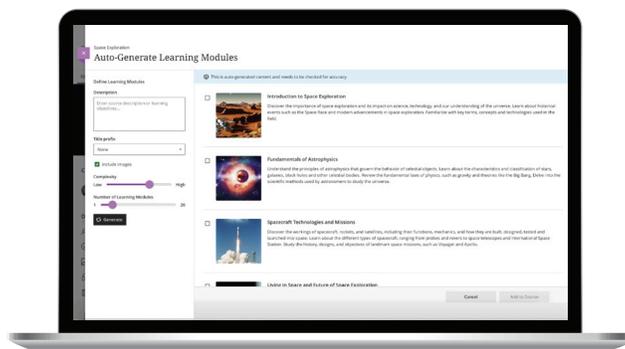

Learn Ultra provides valuable insights at the optimal moment to improve student success and retention. Progress tracking tools outline a path for students to achieve their goals and provide instructors with the necessary information to assist along the way, while pre-built reports make it easy to share these insights outside of the LMS environment. Unlike major competitors, Learn Ultra's data capabilities are included as standard and don't come with any additional costs.

“ The progress tracking button where I can see how many students have accessed my materials is absolutely brilliant! My students use it to self-mark, and I use it for the data to see whether students are engaging with my content.

Steve Montagu-Cairns
Lecturer and Digital Education
Academic Lead
School of Law, University of Leeds

AI = Additional Inspiration

Learn Ultra is the first major LMS to release generative AI features to inspire instructors and instructional designers with course structure, assessments, and grading rubrics. Developed in partnership with Microsoft Azure OpenAI, the AI Design Assistant makes the creation of engaging courses faster and more efficient, while the instructor maintains control over all high-stakes workflows.

All access

Blackboard Learn has always been developed with accessibility in mind, and all workflows and features are passed through rigorous testing prior to release. Now we've taken it a step further and provided all Learn Ultra clients with the Ultra Accessibility Checker powered by Ally as part of their standard license, bringing core capabilities of our market-leading accessibility solution, Anthology® Ally, natively to the LMS. Using the Ultra Accessibility Checker, instructors can easily check content in the rich-text editor for accessibility and optimize prior to releasing to their class.

Blackboard Learn was the most accessible LMS we found during our extensive trials.

Sean Doran
 Program Manager
 National Council for the Blind, Ireland

Ultra will always start with U

Our global community plays an active role in the development of Blackboard Learn Ultra. Since the inception of the **Anthology Idea Exchange** in July 2022, over 3500 client votes have directly informed more than 170 new features. Forget lengthy feedback processes that provide the illusion of user input but never result in real product enhancements – with Learn Ultra you are actively involved in developing the future of the LMS.

It's all included

All of these market-leading features and benefits are available as part of the standard Blackboard Learn Ultra license, with no additional costs, add-ons, or implementations required. Right from day one, Learn Ultra provides the most modern and comprehensive learning experience.
